March 1, 2018.

The County will present the results of a Construction BMP Audit conducted by Woolpert and the recent SCDHEC storm water program audit. The County is providing this training course to educate contractors and CEPSCI certified individuals on installation/maintenance of construction site sediment and erosion control BMPs, as well as highlight specific BMPs from Greenville County that could be improved. The training will also provide an overview of recently revised specifications and details for several sediment and erosion control BMPs, including Silt Fence, Construction Entrances, Inlet Protection Measures, Porous Baffles, and others. Information presented in the training will provide guidance to help contractors and CEPSCI inspectors to achieve compliance on their sites. The County will also review the enforcement process and a Q&A time will be provided. Local **contractors and CEPSCI certified site inspectors are highly encouraged to provide representation at this training event.**

Presenters

Josh Fisher, Chief Construction Inspector for the Land
Development Division

Jacob Burkey, PE Project Engineer at Woolpert
