SEEDING/STABILIZATION NOTES
Greenville County Standard Notes

Temporary Stabilization
Temporary stabilization is defined as the process of creating temporary areas that are to be used in the development of sites. Once these areas are created, they must be maintained in order to prevent erosion and to ensure the stability of the area.

Temporary Stabilization Details
Temporary stabilization may be required if there are no suitable areas available. This process involves the creation of temporary structures such as dikes, embankments, and levees to prevent erosion and ensure the stability of the area.

Temporary Stabilization Materials
Temporary stabilization materials include sand, gravel, and other similar materials that can be easily transported and used to create temporary structures.

Temporary Stabilization Permits
Temporary stabilization permits are required in some areas. These permits are issued by the local government and ensure that the temporary stabilization is being done in accordance with the laws and regulations.

Temporary Stabilization Costs
Temporary stabilization costs vary depending on the size and location of the area to be stabilized. Costs may also vary depending on the type of material used.

Temporary Stabilization Maintenance
Temporary stabilization must be maintained on a regular basis to ensure its effectiveness.

Temporary Stabilization Removal
Temporary stabilization must be removed once it is no longer needed. This process may require the use of specialized equipment and personnel.

Final Stabilization
Final stabilization is the process of creating permanent structures to replace the temporary structures created during the stabilization process.

Final Stabilization Details
Final stabilization may involve the use of concrete, brick, or other similar materials to create permanent structures.

Final Stabilization Materials
Final stabilization materials include concrete, brick, and other similar materials.

Final Stabilization Costs
Final stabilization costs vary depending on the size and location of the area to be stabilized. Costs may also vary depending on the type of material used.

Final Stabilization Maintenance
Final stabilization must be maintained on a regular basis to ensure its effectiveness.
